1.1 OPERATOR HOME

The Operator Home dashboard provides a real-time overview of trips, deliveries, vehicles, drivers, and fleet performance in a clean and actionable layout.

Header (Logo - Home Navigation)

Displays the company logo. Double-clicking the logo navigates back to the Home screen from anywhere in the app.

Search Bar

Global search to quickly find trips, vehicles, drivers, locations, or any operational data.

Quick Actions / Scan

Quick access to scan QR codes or barcodes for trips, deliveries, documents, or assets.

Summary Cards

Key operational counters for Active Trips and Delayed Deliveries with quick access to detailed lists.

DEVICE
iPhone 17

SCREEN SIZE
6.3 inches
(1179 x 2556 px)

ORIENTATION
Portrait

PLATFORM
iOS / Android

All components follow the Mercon Design System for spacing, typography, color, iconography, and accessibility standards.

Active Vehicles Section

Real-time overview of active vehicles with driver info, live status, route preview, and vehicle details for quick monitoring. Each card includes a **Share** option for instant sharing of vehicle information.

Documents Expiry

Shows all expiring documents with days remaining and total count. Helps operators stay compliant and avoid expired documents.

Bottom Navigation

Primary navigation for major sections with a central action button for quick operations like creating trips or adding tasks.

2.1 ROUTE SELECTION

Select customer, define pickup & delivery, and get the best route with pricing from your contract.

ANNOTATIONS

- 1

Customer & Contract
Select customer and contract.
- 2

Contract Status
Shows contract validity and pricing availability.
- 3

Pickup & Drop
Define pickup and delivery locations.
- 4

Route Preview
Recommended route between locations.
- 5

Trip Summary & Pricing
Distance, duration and contract pricing retrieved automatically.
- 6

Price Breakdown
Detailed cost breakdown from quotation.
- 7

View on Map
Open full screen detailed route view.

Pricing is fetched automatically from quotation data based on selected route and contract.

2.2 CARGO DETAILS

Add cargo information and select the most suitable vehicle. The system recommends the best vehicle based on cargo requirements, ensuring safe and efficient transportation.

KEY ANNOTATIONS

- 1

Cargo Information
Enter cargo type, weight, volume, and number of packages.
- 2

Cargo Description (Optional)
Provide additional details about the cargo, handling instructions, or special notes.
- 3

Insurance Status
All shipments are fully insured for peace of mind and secure transportation.
- 4

Vehicle Recommendation
AI recommends the best vehicle based on cargo weight, volume and package count.
- 5

Auto Select
Let the system automatically choose the best vehicle that fits your cargo.
- 6

Next Step
Proceed to Schedule & Pricing to set delivery time and view pricing.

The system validates cargo requirements against vehicle capacity to ensure optimal and safe transportation.

3. Schedule & Pricing

Choose date, time and view freight pricing options

4. Assign Truck & Driver

Select the best truck and driver for this trip

Trip Created

Your trip is ready and confirmed

Each step builds upon the previous one to ensure accurate planning, pricing and resource allocation.

2.3 SCHEDULE & PRICING

Set the pickup date, time window and review freight pricing options. The system calculates delivery ETA, pricing breakdown and shows service level options to choose from.

ANNOTATIONS

- 1

Schedule

Select pickup date and preferred time window for the shipment.
- 2

Transit Information

Shows estimated transit time and delivery ETA based on the route and selected vehicle.
- 3

Pricing Summary

Breakdown of all charges with total price and savings information.
- 4

Savings Info

Shows estimated savings compared to standard route.
- 5

Next Step

Proceed to assign truck and driver after confirming schedule and pricing.

 Pricing is dynamically calculated based on carrier rates, fuel index, distance, weight, and service level.

Trip Created

Your trip is ready and confirmed

Each step builds upon the previous one to ensure accurate planning, pricing and resource allocation.

2.4 ASSIGN TRUCK & DRIVER

The final step is to assign the best matched truck and driver for this trip. The system recommends optimal resources based on availability, distance, performance and trip requirements.

ANNOTATIONS

- 1

Trip Overview
Summary of route, vehicle type, cargo weight and estimated delivery.
- 2

Recommended Truck
AI recommended truck based on best match score, availability and capacity.
- 3

Recommended Driver
AI recommended driver based on skills, experience and route familiarity.
- 4

Match Details
Key match factors including distance, fuel, capacity and overall match score.
- 5

Other Good Options
Alternative trucks and drivers to choose from if needed.
- 6

Final Action
Create the trip after confirming truck and driver assignments.

The system intelligently matches the best available truck and driver based on multiple factors to ensure timely and efficient delivery.

TRIP WORKFLOW

4-step process to create and assign a trip

SUCCESS SCREEN PREVIEW

A preview of the final trip creation screen

Each step builds upon the previous one to ensure accurate planning, pricing and resource allocation.

2.5 TRIP CREATED SUCCESSFULLY

The trip has been successfully created and assigned. This screen provides a summary of the shipment, assigned resources, estimated delivery information, and quick actions for sharing or reviewing the trip.

ANNOTATIONS

- 1

Success Confirmation
Visual confirmation that the trip was created successfully.
- 2

Trip Summary
Displays Trip ID, creation date, route, cargo information, and assigned resources.
- 3

Route Information
Pickup and delivery locations with route overview.
- 4

Assigned Resources
Assigned truck and driver information.
- 5

Share to WhatsApp
Instantly share trip details with customers, drivers, or stakeholders.
- 6

View Trip Details
Navigate to the complete trip information page.
- 7

Go to Home
Navigate back to the Operator Dashboard.

 This is the final screen of the Create Trip flow. It confirms successful creation and provides quick actions for next steps.

TRIP WORKFLOW

5-step process completed successfully

BUSINESS VALUE

- ✓ Trip created in under 2 minutes
- ✓ Instant stakeholder communication
- ✓ Reduced manual coordination
- ✓ Complete shipment traceability
- ✓ Faster operational workflow

The system automatically records the trip, assignment details, pricing, route information, and operational history for future tracking, reporting, and analytics.

3.1 TRIP LIST

The Trip List screen provides a centralized view of all trips with status-based filtering, search, and quick access to trip details. Users can create new trips and manage trip information efficiently.

KEY COMPONENTS

- 1

Status Filter Tabs
Quickly filter trips by status with real-time counts.
- 2

Action Bar
Search, filter, and create new trips with quick actions.
- 3

Trip Card
Displays trip summary with route, vehicle, driver, and status.
- 4

More Options
Access additional trip actions and updates.
- 5

View Details
Navigate to detailed trip information and updates.
- 6

Bottom Navigation
Navigate to other operational modules.

SCREEN PURPOSE

Provides a centralized list of all trips with status filtering and quick access to trip details for efficient management.

- USER ACTIONS**
- View trips by status
 - Search trips
 - Filter trips by multiple criteria
 - Create new trips
 - View trip details
 - Access more trip actions

NOTE

Status counts are updated in real-time based on system data.

3.2 TRIP DETAILS

Detailed trip information with real-time status and key details.

KEY COMPONENTS

3.3 TRIP COMPLETION

The Trip Completion screen finalizes the shipment lifecycle by verifying Proof of Delivery (POD), receiver confirmation, delivery details, and trip completion status. Operators can review delivery evidence and proceed directly to billing or trip records.

ANNOTATIONS

- 1

Completion Status
Displays successful trip completion with delivery confirmation.
- 2

Trip Summary
Shows trip ID, route, and completion status.
- 3

Delivery Information
Displays delivery date, assigned driver, and vehicle details.
- 4

Proof of Delivery (POD)
Centralized access to delivery photo, signed POD, and receiver information.
- 5

Verification Status
Confirms POD verification, receiver confirmation, and completed delivery checks.
- 6

Continue to Billing
Allows operators to move directly into the billing workflow.
- 7

View Trip Details
Provides access to the full completed trip record.

DELIVERY COMPLETION FLOW

Trip Completed → POD Verified → Billing Ready

NEXT STEP PREVIEW

A quick preview of what's next

4.1 Billing Processing

Generate invoice and finalize customer billing.

Completed trips automatically store delivery evidence, receiver confirmations, and operational records for audit and billing purposes.

3.4 BILLING REVIEW

Review trip charges, driver settlement, and billing amounts before creating the final invoice.

ANNOTATIONS

- 1

Trip Summary
Displays trip ID, route, and completion status.
- 2

Customer & Receiver
Shows customer and receiver information.
- 3

Billing Details
Review freight and operational charges.
- 4

Additional Charges
Includes waiting, stops, and other extra costs.
- 5

Driver Settlement
Displays amount payable to the driver.
- 6

Billing Summary
Summary of charges and final billing amount.
- 7

Remarks
Add optional notes for billing reference.
- 8

Save Billing Entry
Save billing record for invoice generation.

BILLING OVERVIEW

- Trip Information**
Completed trip details and delivery information.
- Charge Calculation**
Freight, additional costs and driver settlement.
- Invoice Preparation**
Final billing amount ready for invoicing.
- Billing records ensure accurate invoicing and financial reconciliation after trip completion.

3.5 TRIP TRACKING

Real-time trip tracking with live location, status updates, timeline milestones and driver & vehicle details for complete trip visibility.

ANNOTATIONS

- 1

Route Map
Live route map showing pickup and delivery locations with current position.
- 2

Trip Summary & Status Timeline
Overview of trip ID, route, distance and real-time status progress.
- 3

Driver & Vehicle Information
Driver contact details and vehicle information.
- 4

Trip Information
ETA, remaining distance and last update information.
- 5

Live Status Indicators
Real-time indicators for GPS, driver status and schedule.
- 6

Quick Actions
Quick actions to communicate, share or manage the trip.
- 7

More Options
Access additional trip functions and details.

Live tracking improves operational visibility, ensures timely delivery and enhances customer trust.

SCREEN OVERVIEW

- Live Route Tracking**
Track the trip in real-time with live location and route visualization.
- Real-time Status Updates**
Monitor trip progress with milestone updates in real-time.
- Driver & Vehicle Details**
Access driver contact information and vehicle specifications.
- Trip Insights & ETA**
View ETA, remaining distance and last update for better planning.
- Stay Connected**
Communicate, share updates and manage trips on the go.

Real-time tracking and live updates help teams respond faster, reduce delays and ensure successful deliveries.

6.1 CUSTOMERS LIST

Manage and monitor your customers and contracts in one place.

KEY COMPONENTS

- 1 Metrics Overview
- 2 Search & Filter
- 3 Add Customer
- 4 List Header & Sort
- 5 Customer Information Card
- 6 Status Badge
- 7 Primary Actions
- 8 Secondary Actions
- 9 More Options
- 10 Bottom Navigation

CUSTOMER OVERVIEW

6.2 CUSTOMER DETAILS

The Customer Details screen provides a comprehensive view of a customer's profile, contracts, locations, active trips, and billing information to manage the relationship efficiently.

KEY COMPONENTS

- 1

Customer Header
Displays customer identity, contract status and validity.
- 2

Key Metrics Overview
Highlights locations, trips this month and active trips.
- 3

Contract Information
Shows contract details including type, validity and billing cycle.
- 4

Branches / Locations
Quick access to all customer branches and locations.
- 5

Active Trips
List of ongoing trips with status, routes and assigned drivers.
- 6

Billing Summary
Overview of trips, invoices and outstanding amounts for the current month.
- 7

Quick Actions
Shortcuts to perform the most common customer related actions.
- 8

Bottom Navigation
Primary navigation to move across different sections of the app.

SCREEN PURPOSE

The Customer Details screen gives users a complete operational and financial view of a customer relationship. It centralizes all key information and provides quick access to take action.

KEY USER ACTIONS

- 

View customer profile, contract and status
- 

Access all branches and locations
- 

Monitor active trips and shipment status
- 

Review billing summary and invoices
- 

Create new trips for the customer
- 

Check contract validity and details

USER BENEFITS

- 

Quick access to important customer information
- 

Better visibility into trips and billing
- 

Faster decision making and issue resolution
- 

Improved customer relationship management

NOTE

All actions are role based and permission controlled.

6.3 RATE CARD DETAILS

The Rate Card Details screen enables users to view and manage a customer's rate card, including route based rates, filters, versions, and export options.

KEY COMPONENTS

- 1

Rate Card Header

Displays customer, contract, validity, billing cycle and currency details.
- 2

Information Tabs

Navigate between rate card sections and related information.
- 3

Filters & Search

Filter routes by vehicle type, city and search route information.
- 4

Informational Notice

Highlights important conditions and applicable notes.
- 5

Rate Matrix Table

Displays route based rates with origin, destination, working hours and price.
- 6

Rate Card Summary

Provides overview of routes, vehicle types and last updated information.
- 7

Version Management

Create a new version to update rates while maintaining history.
- 8

Quick Actions

Export, download or share rate card information.
- 9

Bottom Navigation

Primary navigation to move across different sections of the app.

7.0 VEHICLE RENEWAL CENTER

The Vehicle Renewal Center helps users monitor and manage vehicle document expirations across the fleet. It provides real-time status visibility, highlights critical and overdue items, and allows quick actions to renew documents and enable alerts to avoid penalties and ensure compliance.

KEY COMPONENTS

- 1

Status Summary Cards
Visual overview of document status with key counts and indicators.
- 2

Status Filters
Quick filters to view documents by All, Critical, This Month, Overdue or Renewed.
- 3

Search Bar
Search vehicles or document types instantly.
- 4

Renewal List
List of vehicles with document details, expiry info and quick action buttons.
- 5

Document Breakdown
Summary of document types and the number of items due.
- 6

Next 30 Days
Upcoming expirations in the next 30 days for quick planning.
- 7

Alerts Banner
Enable real-time alerts to never miss important renewals.
- 8

Bottom Navigation
Primary navigation to move across different sections of the app.

SCREEN PURPOSE

Provides a centralized workspace to monitor and manage vehicle document expirations. It helps users identify critical and overdue items, take action to renew documents, and ensure timely compliance to avoid penalties.

KEY USER ACTIONS

-
- View document status summary

Filter documents by statusSearch vehicles or documentsView document detailsRenew documents quicklyEnable renewal alerts

USER BENEFITS

- Stay compliant and avoid penalties
- Quick visibility of critical and due items
- Efficient tracking of all vehicle documents
- Timely renewals with proactive alerts
- Better planning with upcoming expirations

NOTE

Document status and expiry dates are updated in real-time based on system data.

7.1 DOCUMENTS

Centralized hub to manage contracts, PODs and operational documents across the platform.

ANNOTATIONS

- 1

Document Summary
Overview of document counts and status at a glance.
- 2

Search & Filter
Find documents quickly using search and filter options.
- 3

Document Categories
Browse documents by category and entity.
- 4

Recent Documents
Recently accessed or uploaded documents.
- 5

Expiring Soon
Documents approaching their expiry date.
- 6

Document Compliance
Encourages uploads and maintains compliance.
- 7

Upload Document
Quick access to upload new documents.

All documents are securely stored and organized for easy access, compliance and audit readiness.

SCREEN OVERVIEW

- Centralized Access**
View document summary and status in one place.
- Organized Categories**
Access documents by vehicle, driver, customer, POD and more.
- Stay Informed**
Track recent uploads and documents expiring soon.
- Ensure Compliance**
Upload and maintain documents to stay compliant and audit ready.
- Secure document management ensures data integrity, accessibility and regulatory compliance across operations.

8.0 NOTIFICATIONS

The Notifications screen provides a centralized view of operational alerts, trip updates, billing events, vehicle renewals, and driver-related activities. Notifications are organized by category and recency for faster action.

KEY COMPONENTS

- 1

Notification Summary
Quick overview of total, unread, read, and important notifications.
- 2

Time-Based Sections
Groups notifications into Today, Yesterday, and Earlier.
- 3

Notification Cards
Displays alert type, description, timestamp, and status.
- 4

Notification Settings
Manage notification preferences and alert channels.
- 5

Notification Filters
Filter notifications by category or priority.
- 6

Bottom Navigation
Navigate to other operational modules.

SCREEN PURPOSE

Centralized notification hub for operational events, system alerts, and workflow updates.

USER ACTIONS

Review unread alerts

Monitor operational updates

Open notification details

Filter notification categories

Manage notification preferences

NOTE

Unread notifications are highlighted for quick identification and prioritization.

9.0

REPORTS DASHBOARD

The Reports Dashboard provides centralized access to operational reporting across trips, drivers, vehicles, customers, and billing. Users can generate, export, and review reports to support operational analysis and business decision-making.

KEY COMPONENTS

- 1

Report Overview

Summary cards displaying key reporting metrics.
- 2

Date Filter

Select reporting period and timeframe.
- 3

Report Categories

Access different report modules.
- 4

Export Reports

Generate and share reports in multiple formats.
- 5

Recent Reports

View recently generated reports and downloads.
- 6

Navigation

Access other operational modules.

SCREEN PURPOSE

Central hub for generating, exporting, and managing operational reports.

USER ACTIONS

Generate reports

Access report categories

Export reports

Download previous reports

Filter reporting periods

NOTE

Reports are organized by operational area to simplify analysis and reporting workflows.

9.1 TRIP REPORTS

Analytics dashboard providing operational visibility into trip performance, status distribution, trends, and revenue metrics.

KEY COMPONENTS

- 1

Report Summary Cards
- 2

Date Range Filter
- 3

Period Selector
- 4

Advanced Filters
- 5

Trend Analytics Chart
- 6

Trip Data Table
- 7
